Global power of

Global presence

Aktaş was established in 1938 as Sait Aktaş Rubber and Tire shop and in 1972 started producing first air springs in Bursa, home of the Turkish automotive industry. After going through an extensive reorganization, name of the company was changed to Aktaş Air Suspension Systems Company and since then it has been serving its OEM and aftermarket customers worldwide.

Today, Aktaş is a rapidly growing global supplier of high quality air springs and industrial rubber components with 8 strategic locations on 4 continents, reaching a manufacturing capacity of 3 million units. Aktaş has 75% market share in Turkish heavy duty air spring aftermarket and has been certified by ISO TS 16949 since 2002. Its internationally proven quality has also placed Aktaş among the leading European manufacturers. The global market share of Aktaş is 17%, that is the 3rd biggest in the world; increase its global presence by exporting 80% of its products to more than 80 countries around the world. Highly preferred **Airtech** brand has a wide range of more than 700 different types of air springs which are being manufactured in five manufacturing plants located in Asia, Europe and Turkey. Aktaş can meet any demand and exceed all expectations with its extensive experience, high technology, skilled workforce and commitment to its partners.

Product information

Truck / Trailer

Air springs are widely used on trucks and trailers. They are fitted on the front, rear and tag axle in case of necessity.

Air springs protect load of the vehicle and give comfort to driver by eliminating adverse road conditions.

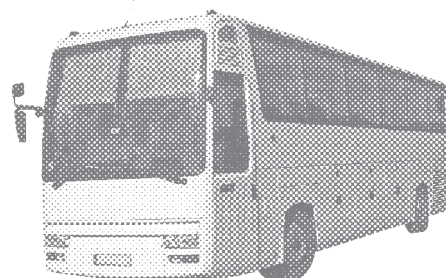

Bus

In Europe and USA, all buses are fitted with air springs, whereas, in many other countries the usage of air suspension systems is increasing.

Buses benefit the great advantages of air springs to achieve consistently high travelling comfort.

This application generally involves two air springs being fitted to the front axle and four to the rear axle in the buses. Air springs are developed according to technical specifications, such as load capacity and spring deflection.

Rolling lobe air springs

With conical beads

Depending on their weight, they achieve high strokes resulting high comfort without a major change in diameter. This high stroke advantage of conical bead rolling lobe air springs enable the loading/unloading and assembling/disassembling operation easier for these vehicles.

The conical sealing surfaces of these springs make them to be reused when the air springs bellows are replaced.

With clamping beads

Rolling lobe air springs with clamping beads differ from the ones with conical beads by the method of fixing. The fixed connection prevents the air springs to be detached from the plate even under the excessive movement connections.

Rolling lobe air springs with clamping beads are supplied by Airtech as a complete unit with its pistons, plates and the internal bumpers, where necessary assembled as a complete unit.

Traceability

If order number starts with 11 means Only Rubber
 If order number starts with 12 means Service Assembly
 If order number starts with 13 means Complete (with piston)

If order number ends with P means Service Assembly
 If order number ends with K means Steel Piston
 If order number ends with KPP means Plastic Piston
 If order number ends with K-ALU means Aluminium Piston

If order number ends with T means "Made in Turkey"

Air fitting

Inlets air.

Top plate

Connects the air spring to the vehicle chassis.

Cord reinforced fabric

Maintains the loading capacity of air spring.

Rubber layer

Covers and strengthens of cord-reinforced fabric.

Bumper

Prevents damage of the air spring of the vehicle.

Bottom plate

Holds the rubber bumper and connects the air spring to the piston of the vehicle.

Working conditions

Preventive maintenance

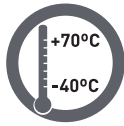

All surfaces including the air spring and the installation area should be free from oil, petroleum and solvents.

Hydraulic and pneumatic line of the air spring supply system should be leakproof.

Air pressure should not exceed 7 bar / 101 psi.

Ambient temperature should be between -40°C to +70°C.

There should be sufficient clearance around the air spring to prevent any contact.

All bolts should be tightened according to the required torque specifications.

Vehicle should be loaded as per manufacturing and technical specifications.

Air springs should be kept clean. Use water and soap for cleaning.

Thinner, lighter and naturally more durable

Our products are developed **for you needs**

We are monitoring our air springs at every stage from production to usage, thanks to the barcode system supported by **TÜBİTAK**.

Airtech air springs have 2 layers instead of four and heat less, which means a longer and more comfortable driving experience. Remember, thicker air springs heat up more and therefore wear out faster, and have a shorter life span.

We produce the pistons with composite materials (reinforced plastics) as well as with metal. This gives us the possibility to present our products that are lighter but also just as strong.

Your safety **is our concern**

We are manufacturing defect free products that always have the high performance, thanks to 25 different tests.

We are manufacturing air springs that are able to endure not 6 or 7 but 21 bars of pressure. We put them under test to ensure that they will not let you down under -40°C and $+70^{\circ}\text{C}$.

We test our air springs under real road conditions by a simulation machine which is patented by us and supported by **TÜBITAK**.

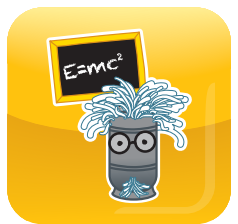

Our high quality is also certified by international certification institute **DEKRA** and our air springs are the only ones that past a test of 2,000,000 cycles.

We are always **beside you**

Aktaş air springs are OEM certified.

Just tell us the brand of your vehicle. You will definitely find the air spring you are looking for at **Airtech**, thanks to our large product range.

We have not only thickened the court fabric which provides the strength to air springs along with the removal of extra layers of rubber to get rid of additional heat, we also have used less raw materials to be environmentally friendly.

Warranty

Our air springs are warranted to be free from defects in material and workmanship.

This warranty includes any damage caused by environmental conditions, excludes improper installation, accidents, incorrect applications and use in any application other than is specified under original equipment cross references.

No representative or sales agency other than Aktaş itself is authorized to make any additional promise or agreement regarding the warranty of the products that are listed in this catalogue other than what is mentioned above.

In no event shall the manufacturer be liable under this warranty for any incidental or consequential damages including but not limited to loss of freight, loss of profit, equipment or personal downtime.

A close-up, circular inset image showing a detailed view of an air spring. The image highlights the dark, ribbed pleated fabric of the spring, which is secured with visible stitching along its edges. The surrounding metal housing is highly reflective, showing bright highlights and shadows that emphasize its curved, cylindrical shape. The background within the circle is a bright, overexposed white, creating a strong contrast with the dark fabric.
